SUMMARY

Information Technology student targeting a **Frontend / Full-stack Developer** role, specializing in **Next.js** and **Node.js**. Delivered enterprise Next.js frontend for a Japanese client at FPT Software and built full-stack products on a Next.js + Node.js/Express stack, including a production AI SaaS at guai.com.vn. Strong in TypeScript and REST API design; also ships mobile with React Native. English (working), Japanese (basic).

EXPERIENCE

FPT Software (FSoft) Jul 2025 – Oct 2025
*Frontend Developer Intern — **Next.js*** *Ho Chi Minh City, Viet Nam*

- Developed frontend features with **Next.js** and **TypeScript** for an enterprise web application delivered to a **Japanese client**.
- Built responsive, spec-compliant UI components and integrated REST APIs with backend and QA teams.
- Worked in an agile process with code reviews and Japanese-standard documentation and quality requirements.

PROJECTS

GU.AI — AI Fashion Photography Platform 2026 | Team of 3
*Full-stack — **Next.js**, **Node.js/Express**, TypeScript, PostgreSQL/Supabase, Socket.IO* *guai.com.vn · github*

- Built a 3-app SaaS platform (**Next.js** customer web + admin panel, Express/TypeScript API) with a **98-endpoint REST API** and **9 AI tools** for fashion sellers — virtual try-on, model generation, image/video editing — powered by Fashn.ai.
- Implemented **RAG-based** semantic search using Google Gemini embeddings (768-dim) with **pgvector**/HNSW indexing on PostgreSQL.
- Integrated **PayOS** payments with **HMAC webhook signature verification** for secure credit-based billing, subscription plans, and dynamic per-tool pricing.
- Built real-time notifications and support chat with **Socket.IO** (replacing 5s polling), a **5-tier rate-limiting** layer protecting paid AI-API quota, plus an admin panel with **RBAC**, live monitoring, and revenue analytics.

HistoryTalk — Interactive Vietnamese History Learning Platform 2026 | Team of 4
*Full-stack — **Next.js**, **Node.js/Express**, TypeScript, MongoDB, React Native (Expo), Firebase* *github*

- Bootstrapped the Express/TypeScript/MongoDB backend and the Expo/React Native mobile app from scratch, authoring both repositories' initial architecture.
- Built an AI platform where users voice-chat with **RAG-powered** historical characters (Azure Speech), with quizzes and gamification — daily quests, streaks, and an Android home-screen widget.
- Implemented an **OCR-based PDF ingestion pipeline** (Tesseract.js) for the RAG document feature, handling 150-page documents with print-artifact filtering.
- Integrated **PayOS** payments (custom HMAC-SHA256-signed REST client), **Firebase Cloud Messaging** push, and Google OAuth across a **154-endpoint, 19-model** REST API.

EDUCATION

FPT University Oct 2023 – Feb 2027 (Expected)
Bachelor's Degree in Information Technology — GPA: 3.52/4.0 *Ho Chi Minh City, Viet Nam*

SKILLS

Core Stack: Next.js · Node.js/Express · TypeScript · REST API
Programming Languages: JavaScript, TypeScript, C/C++, Java
Frontend: Next.js, React.js, TailwindCSS, Responsive Design, React Native (Expo)
Backend: Node.js, Express, REST API, Socket.IO
Database: PostgreSQL, Supabase, MongoDB
Practices & Tools: Git, GitHub, Docker, CI/CD, Agile/Scrum, Code Review
Foreign Languages: English, Japanese (Fundamental)

AWARDS & ACHIEVEMENTS

ICPC National Contest 2025
Contestant — competed with top university programming teams in the region
