SUMMARY

Final-year Information Technology student looking for a Frontend or Full-stack Developer position, working with Next.js, Node.js and TypeScript. I want to join a product team where I can ship features to real users, learn from code review, and grow into a solid full-stack engineer.

EXPERIENCE

FPT Software Jul 2025 – Oct 2025

Frontend Developer Intern *Ho Chi Minh City, Vietnam*

- Implemented screens and features in Next.js and TypeScript for an enterprise web application built for a Japanese client, following detailed screen specifications.
- Integrated REST APIs and fixed defects reported by QA, working with backend developers to resolve mismatches between UI and API contracts.
- Worked in a Scrum team with mandatory code review and the client's documentation and quality standards.

PROJECTS

GU.AI — AI Product Photography Platform for Fashion Sellers 2026

Full-stack Developer, team of 3 — Next.js, Express, TypeScript, PostgreSQL, Socket.IO *guai.com.vn · GitHub*

- Co-built a live SaaS product that lets fashion sellers create product photos with AI (virtual try-on, model generation, image and video editing via Fashn.ai), made up of a customer web app, an admin panel and an Express REST API.
- Built credit-based billing on PayOS: subscription plans, per-tool pricing, and webhook signature verification so payment confirmations cannot be forged.
- Replaced 5-second polling with Socket.IO for real-time notifications and support chat, and added rate limiting to protect the paid AI API quota from abuse.
- Implemented semantic search with Gemini embeddings stored in PostgreSQL using pgvector (HNSW index).

HistoryTalk — Vietnamese History Learning App 2026

Backend & Mobile Developer, team of 4 — Express, TypeScript, MongoDB, React Native (Expo), Next.js *GitHub*

- Set up the initial architecture of the Express/TypeScript/MongoDB backend and the React Native (Expo) mobile app, which the rest of the team built on.
- Built voice conversations with AI historical characters whose answers are grounded in uploaded documents (RAG), using Azure Speech for speech-to-text and text-to-speech.
- Built a PDF ingestion pipeline using Tesseract.js OCR that handles scanned documents of up to 150 pages and removes print artifacts before indexing.
- Integrated PayOS payments, Firebase Cloud Messaging push notifications and Google sign-in; added quizzes, daily quests, streaks and an Android home-screen widget.

SKILLS

Languages: TypeScript, JavaScript, Java, C/C++
Frontend: Next.js, React, Tailwind CSS, React Native (Expo)
Backend: Node.js, Express, REST APIs, Socket.IO
Databases: PostgreSQL (Supabase, pgvector), MongoDB
Tools: Git, GitHub, Docker, Agile/Scrum
Foreign languages: English (working proficiency), Japanese (basic)

EDUCATION & ACHIEVEMENTS

FPT University Oct 2023 – Feb 2027 (expected)

B.Sc. in Information Technology — GPA 3.52/4.0 *Ho Chi Minh City, Vietnam*

ICPC Vietnam National Programming Contest — Contestant 2025
